Art Unit: 2155

DETAILED ACTION

1. This is in response to the Amendment filed on 10/6/2000. Claims 1-37 are presented for examination.

REASSIGNMENT AFFECTING APPLICATION LOCATION

2. The Art Unit location of your application in the PTO has changed. To aid in correlating any papers for this application, all further corresponding regrading this application should be directed to *Art Unit 2155*.

Claim Rejections - 35 USC § 103

3. Claims 1-9, 11, 13, 15 and 18-20 are ejected under 35 U.S.C. 103(a) as being unpatentable over Meske et al U.S. pat. No.5,530,852 and in view of Rogers et al. US pat. No.5,701,451.

As to claim 1, Meske discloses the steps of:

accessing a WEB page requested by the customer (user), translating (i.e., converting) the WEB data according to the template and transmitting the translated data to the client device (see col.5 line 58-col.6 line 36), storing the parameters as a template (HTML file, 420 of fig.4) at the Web server (150 fig.2).

Art Unit: 2155

Meske does not specifically disclose creating a listing of parameters derived from one or more of hardware or software characteristics of the client device, characteristics of a WEB page, and preferences of a customer using the clients' device. However, Rogers discloses creating a listing of parameters (i.e., Web server processing clients' data according to clients' parameters, performing calculations and formatting and other services prior to the web browser or to other locations, see abstract, fig.1, col.4 lines 40-60, col.6 line 57 to col.7 line 41, col.9 line 56 to col.10 line 11) derived from one or more of hardware or software characteristics of the clients' device, characteristics of a WEB page, and preferences of a customer using the clients' device (data according to the database servers 18, see col.9 line 56 to col.10 line 36).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize Roger's teachings into Meske's computer's system to allow users to request

in multiple platforms at different physical locations more quickly.

As to claim 2, Meske further teaches the parameters include details of a display used by the

information because it would have allowed a user of a client to access and assemble information

Claims 3-5 are rejected as the same reasons set forth in claims 1 and 2.

clients' device (see fig.8 and col.10 lines 41-64).

Art Unit: 2155

Claim 6 is rejected as the same reasons set forth in claim 1 and 2. As to the added limitation,

Meske further teaches using tools for altering the characteristics (see col.9 lines 24-48 and col.10

lines 18-40).

As to claim 7, Meske further discloses the editor executing on the client device (see col.3 line

55-col.4 line 12).

As to claim 8, Meske further discloses the editor (user) executes on a WEB server as a part of a

WEB page, and is adapted for manipulation by a client accessing the WEB page (see fig.8, col.4

lines 13-51 and col.10 lines 41-64).

Claim 9 is rejected as the same reasons set forth in claim 1. Neither Meske nor Rogers diclsose

the use of Mark-Script. However, using Mark-Script in the network computer is well known in

the Art. It would have been obvious to one of the ordinary skill in the art at the time the

invention was made to utilize a well known feature in the computer system of Meske to provide

platform and application independent documents in the Web because it would have enabled users

to define the structure and the tags of individual documents more quickly.

Page 4

Art Unit: 2155

Claim 11 is rejected as the same reasons set forth in claim 9. As to the added limitation, Meske further teaches the step of accessing the WEB server by the client device and initiating execution of the Script (i.e., HTML files to SGML file).

Claim 13 is rejected for the same reasons set forth in claims 1 and 11.

As to claim 15, Meske further discloses a step for reducing content of pre-fetched WEB pages before transmission to the clients' device, by consulting parameters based on characteristics of the clients' device (see col.9 lines 24-48).

As to claim 18, Meske discloses a system for Internet browsing, comprising:

a host computer connected to one or more peripheral devices and to the Internet and a WEB server adapted for browsing the Internet for the host (see 150 of fig.2 and fig.5 and col.6 lines 15-51).

the WEB server fetches WEB pages for the host computer and reduces data content before transmission to the host based on characteristics of one of the peripheral devices connected to the host (see col.6 line 38-col.7 line 18 and col.9 lines 24-48).

As to claim 19, Meske further teaches the WEB server following a script furnished by the host computer for pre-fetching WEB pages and storing them at the WEB server for transmission to

Page 6

Art Unit: 2155

the host computer on demand (see col.1 lines 35-57, col.6 line 38-col.7 line 18 and col.9 lines 24-48).

Claim 20 is rejected as the same reasons set forth in claims 1 and 19. As to the added limitation, Meske further teaches the step of:

a source-side template adapted for converting data requested by the WEB server to an Hyper Text Markup Protocol (HTML) before transmission to the WEB server (see col.5 line 58-col.6 line 37).

4. Claims 10, 12, 14, 16 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Meske and Rogers as applied to claim 1 above, and further in view of Judson U.S. pat. No.5,572,643.

As to claim 10, Meske and Rogers' teachings still applied as in claims 1 and 9 above. Neither Meske nor Rogers teaches refreshing the current Web page. However, refreshing Web page all pre-fetched and stored WEB pages according to the list of WEB pages is generally well known in the art as disclosed by Judson (see abstract, col.2 lines 29-53 and col.5 line 50-col.6 line 12). It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize Judson's teachings in Meske's network system because it would have enabled the system to update the content Web page into the current state.

Page 7

Art Unit: 2155

Claims 12 and 14 are rejected under the same reasons set forth in claim 10.

As to claims 16 and 17, Judson further discloses a step for passing through to a client a request initiated by a pre-fetched page not yet transmitted to the client, either during or after pre-fetch (see abstract and col.3 line 46-col.4 line 24) and the request is for one of a security or identification input (see col.2 lines 6-28 and col.6 line 62-col.7 line 17). . It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize Judson's teachings in Meske's network system because it would have enabled the system to update the content Web page into the current state.

5. Claims 21-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mekse US pat. No.5,530,852 and Rogers as in claim 1 above and further in view of Gleeson et al US pat. No.5,627,829.

Claim 21 is rejected for the same reasons set forth in claim 1 with the combination of Meske and Rogers. Neither Meske nor Rogers discloses a first set of files is transposed into a first set of files fewer in number than the first set of files. However, Gleeson discloses a first set of files is transposed into a first set of files fewer in number than the first set of files (i.e., compressing and decompressing data) by reducing the size of data packet (see abstract, figs.12A, 12B and col.5

201110111001. 07/073,01

Page 8

Art Unit: 2155

line 63 to col.6 line 56). It would have been obvious to one of the ordinary skill in the art at the time the invention was made to modify Meske with Gleeson's teaching because it would have reduced the number and size of data packets transferred over the wireless network.

As to claims 22 and 23, Gleeson discloses that the second set contains characteristics of the client (see col.6 lines 40-65 and col.col.8 lines 1-44), a single file (see fig.12A and col.15 line 45 to col.16 line 23). Gleeson also discloses saving a copy of transposed data for future communications (see col.16 lines 24-61 and col.col.17 lines 16-48). It would have been obvious to one of the ordinary skill in the art at the time the invention was made to modify Meske with Gleeson's teachings because it would have reduced the number and size of data packets transferred over the wireless network.

As to claim 25, Meske further discloses the server transposes HTML files (see col.4 lines 12-51). Claim 26 is rejected for the same reasons set forth in claim 1.

Claims 27-31 are rejected for the same reasons set forth in claims 21-26 respectively.

Claims 33-37 are rejected for the same reasons set forth in claims 21-24 and 26 respectively.

Conclusion

Art Unit: 2155

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Khanh Dinh whose telephone number is (703) 308-8528. The examiner can normally be reached on Monday through Friday from 8:00 A.m. to 5:00 P.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ayaz R. Sheikh, can be reached on (703) 305-9648. The fax phone number for this group is (703) 305-7201.

A shortened statutory period for reply is set to expire <u>THREE</u> months from the mailing date of this communication. Failure to response within the period for response will cause the application to become abandoned (35 U.S.C. Sect. 133). Extensions of time may be obtained under the provisions of 37 CFR 1.136(A).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 305 -9600.
